**WIM DIESEL**

**E-LOCK**

## More about **E-LOCK**

E-lock is an electronic sealing device that monitors the opening and closing of compartments and provides a unique electronic code with a time stamp anytime movement on the seal is detected.

Once the compartment is opened, the seal will turn red on the screen indicating that the seal has been opened with a timestamp.

Live tracking can be added at an additional cost.

## A Visual Representation **E-LOCK**

All compartments  
are sealed

A compartment  
has been opened

# FEATURES

E-lock allows each compartment to be individually sealed while monitoring the manlid, the bottom valve and the API coupling individually.

Each seal has its own unique code, thus allowing for multiple customer deliveries while keeping unopened compartments sealed and intact upon arrival.

## 1. COLOURFUL LCD DISPLAY

**E-Lock** has a colour LCD screen that is placed in rugged housing, looks modern and is very user friendly.

## 2. CUSTOM CONFIGURATIONS

**E-Lock** allows for custom compartment configurations and will work on a semi, rigid or draw bar trailer.

3.

## ADDITIONAL ADD-ONS

A wet leg sensor can be added at an additional cost.  
**E-lock** is wifi enabled allowing for collected data to be retrieved.  
Data retrieval can be available at an additional cost.
